• Interrelationship of building and surroundings: Located on west side of Norton Street close to the intersection with Whalley Avenue, a major commercial street. Norton Street to the north is a residential street of early 20th-century 1- and 2-family homes and apartment buildings. The site is a 96-foot wide lot, wider than the typical adjoining lots, and the building is set back farther than typical, behind a large copper beech tree.

• Other notable features of building or site (Interior and/or Exterior)

The building consists of a concrete masonry auditorium raised a half level above grade, with a full basement. This block is 50 feet wide by 100 feet deep and is set back approximately 100' from the sidewalk line. This is the oldest part of the building, constructed in 1958. Attached at the front is a 38'by 60' two-story block offset toward the north, creating an entry court on the south to the doorways of the main auditorium. This block was added in 1978, and contains a chapel, office, and additional spaces on the second floor.

The facade faces east to Norton Street. The facade and the entry court walls are red brick, while the remainder of the walls are painted concrete block masonry. A full height gateway to the entry court is formed by a high lintel which extends in the plane of the east facade. At the southeast corner, a brick pier supports the end of the lintel. The large opening is visually counterbalanced by a rectangular solid forming the front wall of the building. The plane of brick is broken only by four narrow metal framed slit windows, a recessed porch, and a square opening above – all clustered at the extreme right side of the composition. A bronze abstract relief sculpture hangs high on the wall near the entry gate.

At the rear of the entry court, entry to the auditorium is through triple narrow-stile metal framed glazed doors with glazed panels above and four-light sidelights on the lower and upper levels. Brick piers between the doors have ornamental light fixtures; a stone lintel carried the name of the synagogue, "Young Israel," but the lettering has been removed. A concrete porch and two risers stretch the full width of the court. The north wall of the court, which is the south wall of the front block, has metal-framed sliding windows on the first and second levels, which flank a trombe wall consisting of translucent glazing material behind which is an air space, then a black-painted concrete masonry wall to absorb solar heat. Small vents at the top and fans in the interior, control the distribution of the hot air for solar heating. Below the trombe wall are three basement windows.

The rear auditorium portion of the building is lit by basement and upper-level metal framed factory-type windows with awning and fixed sash. A parking area is located at the rear, and the front yard features a large and dramatic copper beech tree. The roof is flat except for a sloping area at the northeast corner that appears to cover a stair to the 2nd floor.

• Historical or Architectural importance:

Prior to the urban renewal period of the late 1950s to the 1970s, most of New Haven's Jewish population was clustered in an area known as the Oak Street neighborhood, south and east of the New Haven Green. There were more than a dozen synagogues, located within walking distance of the members' homes.

When plans were made to demolish the Oak Street neighborhood and build CT Route 34 as a sunken highway, most of the synagogues were purchased through eminent domain and torn down. The eviction of the Jewish community from the area accelerated a movement that was already occurring as families were moving out of downtown into more suburban settings such as the Edgewood, Beaver Hills, and Westville neighborhoods of New Haven and to nearby suburban towns. At the same time, the Reform and Conservative branches of Judaism were gaining popularity with some families. Permitted to drive on the Sabbath, this group had greater mobility than those who remained Orthodox. Using payments from the Redevelopment Agency's purchase of their old synagogue buildings, the congregations moved and built new facilities in other areas of the city (see Inventory forms for 74 West Prospect Street and 85 Harrison Street) and suburban towns.

Young Israel, an Orthodox congregation, purchased a half-acre property at 292 Norton Street which had a house already in place. It appears that they constructed the auditorium in 1958 behind the house and the copper beech tree, and made use of the house. In 1975 the house burned, and two years later it was replaced by the front addition with its brick facade and trombe wall for solar heat. After the oil embargo of the early 1970s, alternative energy technology strategies became popular, although still experimental; Chapman and Phillips were proponents.
